Implementation of Fuelmaster Vehicle System

Hamden – The Town of Hamden is proud to announce the implementation of a new Town-wide vehicle maintenance and fuel monitoring system, Fuelmaster, developed by Syntech Corporation. This new system allows the Town to efficiently monitor all vehicles within the Town fleet. It has the capability to digitally monitor and record vehicle statistics such as miles traveled, average speed, engine run and engine idle times, and diagnostic information such as maintenance and service requirements. In addition to vehicle maintenance logs, the Fuelmaster system allows the Town to keep track of all fuel transactions, and the specific location of each transaction. The Fuelmaster system is currently functioning for all eligible Town vehicles, accessible only to staff with specially designated fuel cards.

“I am confident that the Fuelmaster system will allow the Town to save substantial costs associated with the purchase of fuel, and just as important, give us a strong tool to enhance the organization of fleet vehicle maintenance records. This has the opportunity to save the Town significant costs by bolstering the longevity of our vehicle fleet.” said Mayor Curt Balzano Leng.

Purchasing Agent Philip Goodwin remarked “I am encouraged that the Town has taken steps to better manage its fleet. I am looking forward to the cost savings and increased efficiency that the Fuelmaster system will deliver.”

The implementation of the Fuelmaster system throughout the Town of Hamden’s 230+ vehicle fleet will ultimately allow vehicles to stay on the road longer and perform more efficiently and effectively. In addition to strengthening the longevity of the Town fleet, the program also provides greater accuracy in fuel budgeting per department. Town of Hamden officials are confident that the Fuelmaster system will provide notable results in terms of vehicle reliability thereby reducing Town-wide fuel consumption.
