### **THE HAMDEN FIRE DEPARTMENT** **ENCOURAGES SAFETY AND PRECAUTION THIS WINTER**

**HAMDEN** – Hamden Fire Chief, David Berardesca, would like to share with residents some simple ways to help community members understand the characteristics of fire.

#### **Fire is FAST!**

##### **There is little time!**

In less than 30 seconds a small flame can get completely out of control and turn into a major fire. It only takes minutes for thick black smoke to fill a house. In minutes, a house can be engulfed in flames. If you wake up to a fire, you won't have time to grab valuables because fire spreads too quickly and the smoke is too thick. There is only time to escape.

#### **Fire is HOT!**

##### **Heat is more threatening than flames.**

A fire's heat alone can kill. Room temperatures in a fire can be 100 degrees at floor level and rise to 600 degrees at eye level. Inhaling this super-hot air will scorch your lungs. This heat can melt clothes to your skin. In five minutes a room can get so hot that everything in it ignites at once: this is called flashover.

#### **Fire is DARK!**

##### **Fire isn't bright, it's pitch black.**

Fire starts bright, but quickly produces black smoke and complete darkness. If you wake up to a fire you may be blinded, disoriented and unable to find your way around the home you've lived in for years.

#### **Fire is DEADLY!**

##### **Smoke and toxic gases kill more people than flames do.**

Fire uses up the oxygen you need and produces smoke and poisonous gases that kill. Breathing even small amounts of smoke and toxic gases can make you drowsy,

disoriented and short of breath. The odorless, colorless fumes can lull you into a deep sleep before the flames reach your door. You may not wake up in time to escape.

### **Tips**

- Home fires occur most often in winter. Keep anything that can catch fire at least 3 feet from heating equipment.
- Never use an oven to heat your home. Stay in the kitchen when frying, grilling, or broiling food.
- Turn space heaters off when you leave the room or go to bed.
- Make sure all vents are clear of snow and ice to allow carbon monoxide to vent outside.
- Have your furnace, heating system and chimneys serviced each year by a qualified professional.
